

Federal Board HSSC-I Examination

Model Question Paper Statistics

(Curriculum 2006)

Section - A (Marks 19)

Time Allowed: 25 minutes

Section – A is compulsory. All parts of this section are to be answered on this page and handed over to the Centre Superintendent. Deleting/overwriting is not allowed. Do not use lead pencil.

ROLL NUMBER					
0	0	0	0	0	0
1	1	1	1	1	1
2	2	2	2	2	2
3	3	3	3	3	3

Q1. Fill the relevant bubble against each question. Each part carries one mark

Sr no.	Question	A	B	C	D	A	B	C	D
i.	The branch of statistics that is concerned with procedures for obtaining valid conclusions is called:	Descriptive statistics	Inferential statistics	Theoretical statistics	Bio Statistics	☐	☐	☐	☐
ii.	Census reports published are:	Primary data	Secondary data	Confidential data	Fictitious data	☐	☐	☐	☐
iii.	A graph of a cumulative frequency distribution is called:	Histogram	Frequency polygon	Ogive	Frequency curve	☐	☐	☐	☐
iv.	The bases of classification are:	Two	Three	four	five	☐	☐	☐	☐
v.	Find the arithmetic mean of X if following deviations are given. $\sum(X-11)=6$, $\sum(X-30)=19$ and $\sum(X-17)=0$.	11	17	30	19	☐	☐	☐	☐
vi.	Geometric mean of numbers 2, 4 , 8 and 64 is:	4	8	16	64	☐	☐	☐	☐
vii.	The model letter(s) of the word “STATISTICS”:	S	S & I	S and T	T	☐	☐	☐	☐
viii.	The Harmonic Mean (H.M.) of the series 1, 2, 4 is:	5	7	7/5	12/7	☐	☐	☐	☐

ix.	The Sum of squared deviations of the values is least when deviations are taken from:	Athematic Mean	Median	Mode	Geometric mean	☐ ☐ ☐ ☐
x.	Variance is zero only if all observations are:	square	Square root	Different	Same	☐ ☐ ☐ ☐
xi.	The price relative is the percentage ratio of current year price and:	Current year price	Base year price	Current year quantity	Base year quantity	☐ ☐ ☐ ☐
xii.	An index number that measures the average relative change in cost of living is called:	Wholesale price index number	Consumer price index number	Sensitive price index number	Industrial index number	☐ ☐ ☐ ☐
xiii.	Which of the following indices has an upward bias?	Laspeyres Index number	Paasche index number	Fisher index number	Value index number	☐ ☐ ☐ ☐
xiv.	When regression line passes through origin then intercept 'a' is:	One	zero	negative	positive	☐ ☐ ☐ ☐
xv.	The Independent variable is also called:	Explanatory variable	regressor	predictor	All of these.	☐ ☐ ☐ ☐
xvi.	When two variables move in same direction, the correlation will be:	zero	positive	negative	neutral	☐ ☐ ☐ ☐
xvii.	The value of correlation coefficient (r) lies between:	$-\infty$ to ∞	-1 to 1	0 to 1	-1 to 0	☐ ☐ ☐ ☐
xviii.	In summers, the sale of ice-cream increases is an example of:	Secular variation	Cyclical variations	Seasonal variations	Random variation	☐ ☐ ☐ ☐
xix.	The main components of time series are:	two	three	four	five	☐ ☐ ☐ ☐

Federal Board HSSC-I Examination Model Question
Paper Mathematics (Curriculum 2006)

Time allowed: 2.35 hours

Total Marks: 66

Note: Answer all parts from Section ‘B’ and all questions from Section ‘C’ on the **E-sheet**.
Write your answers on the allotted/given spaces.

SECTION – B (Marks 42) (14 × 3 = 42)

Q.2	Question	M	Question	M																																	
i.	Following are the number of mistakes made by 25 typists in a typing test: 4, 8, 0, 5, 8, 4, 3, 5, 7, 7, 8, 8, 3, 2, 7, 1, 1, 0, 2, 4, 6,4,6,3,5. Make a discrete frequency distribution.	3	OR	Distinguish between histogram and historigram.	1.5+1.5																																
ii.	Make class boundaries, class mark and cumulative frequency for the following frequency distribution. <table><tr><td>Classes</td><td>Frequency</td><td>Classes</td><td>Frequen cy</td></tr><tr><td>3-3.9</td><td>5</td><td>6-6.9</td><td>10</td></tr><tr><td>4-4.9</td><td>7</td><td>7-7.9</td><td>5</td></tr><tr><td>5-5.9</td><td>8</td><td>8-8.9</td><td>3</td></tr></table>	Classes	Frequency	Classes	Frequen cy	3-3.9	5	6-6.9	10	4-4.9	7	7-7.9	5	5-5.9	8	8-8.9	3	1+1+1	OR	If $\sum_{i=1}^4 X=10, \sum_{i=1}^4 Y =40, \sum_{i=1}^4 XY=100$. Find the values of $\sum_{i=1}^4 (2X + 5)(Y - 4)$	3																
Classes	Frequency	Classes	Frequen cy																																		
3-3.9	5	6-6.9	10																																		
4-4.9	7	7-7.9	5																																		
5-5.9	8	8-8.9	3																																		
iii.	Define discrete and continuous variable with examples.	1.5+1.5	OR	Write down any three qualities of a good average	3																																
iv.	The average marks obtained by three sections of 1 st year class are given below. Find the combined mean of 1 st year class. <table><tr><td>Sections</td><td>No. of students</td><td>Means</td></tr><tr><td>A</td><td>35</td><td>60</td></tr><tr><td>B</td><td>30</td><td>50</td></tr><tr><td>C</td><td>20</td><td>70</td></tr></table>	Sections	No. of students	Means	A	35	60	B	30	50	C	20	70	3	OR	The reciprocal of the values of the variable ‘X’ are given below. Compute mean of X. $\frac{1}{x} =0.0833, 0.0526, 0.0667, 0.0588, 0.05, 0.0370, 0.0455$.	1+2																				
Sections	No. of students	Means																																			
A	35	60																																			
B	30	50																																			
C	20	70																																			
v.	The following values have been obtained from a frequency distribution of a variable x. $X=62+5U, \sum f=120, \sum fU = 140, \sum fU^2=598$. Calculate arithmetic mean, variance and standard deviation	1+1+1	OR	The following data are obtained from past series of innings of two batsmen A and B. <table><tr><td></td><td>Batsman A</td><td>Batsman B</td></tr><tr><td>Average inning Score</td><td>75</td><td>60</td></tr><tr><td>Variance of score</td><td>64</td><td>25</td></tr></table> (a)Which batsman is better run getter (b) Who is more consistent player		Batsman A	Batsman B	Average inning Score	75	60	Variance of score	64	25	1+2																							
	Batsman A	Batsman B																																			
Average inning Score	75	60																																			
Variance of score	64	25																																			
vi.	In moderately skewed distribution, mean is 25 and mode is 28. Find the approximate value of median	3	OR	Compute Mean deviation from median and Mean coefficient of dispersion from the following. 8, 4, 6 , 5 , 9 ,10 , 2 , 13 ,15	2+1																																
vii.	Calculate Index number (a) taking 2010 (b) average of first 03 years as base. <table><tr><td>YEA</td><td>20</td><td>20</td><td>20</td><td>20</td><td>20</td><td>20</td><td>20</td></tr><tr><td>R</td><td>10</td><td>11</td><td>12</td><td>13</td><td>14</td><td>15</td><td>16</td></tr><tr><td>PRI</td><td>20</td><td>18</td><td>25</td><td>28</td><td>30</td><td>35</td><td>42</td></tr><tr><td>CE</td><td></td><td></td><td></td><td></td><td></td><td></td><td></td></tr></table>	YEA	20	20	20	20	20	20	20	R	10	11	12	13	14	15	16	PRI	20	18	25	28	30	35	42	CE								1.5+1.5	OR	For a frequency distribution of ‘X’, it is given that $Q_1 =20, Q_2= 40$ and $Q_3=50$. Find the Bowley’s coefficient of skewness	1+2
YEA	20	20	20	20	20	20	20																														
R	10	11	12	13	14	15	16																														
PRI	20	18	25	28	30	35	42																														
CE																																					
viii.	If $V(X)=4$ and $V(Y)=5$,then find the (a) $Var(2X-3Y)$ (b) $Var(\frac{X}{2} + 5Y)$	1.5+1.5	OR	If fisher index number = 156 and laspeyres index number =160 then find the value of Paasche index number.	3																																

ix.	Compute consumer price index number from the following.								3	OR	Differentiate between simple and composite index numbers	1.5+1.5	
	Commodity	A	B	C	D	E							
	Weight(W)	6	5	4	1	2							
	Price relative(I)	61.5	146.67	74.3	76.2	90.1							
x.	If the regression lines Y on X and X on Y are $2X-3Y=0$ and $4y-5X=0$ then find b_{yx} and b_{xy} .								1.5+1.5	OR	Describe the properties of correlation coefficient(r).	3	
xi.	If $b_{yx} = -0.95$ and $b_{xy} = -0.8$. Find the value of correlation coefficient(r).								3	OR	If $n=10$, $\sum D_x = -87$, $\sum D_y = 43$, $\sum D^2_x = 949$, $\sum D^2_y = 543$, $\sum D_x D_y = 385$.Find Coefficient of correlation (r)	3	
xii.	Calculate 3-years simple moving average from the following.								3	OR	Given $\bar{X} = 50$ and $\bar{Y} = 60$, $S_{yx}=36$, $S_x=4$ and $S_y=9$. Find regression line X on Y.	3	
	Years	2000	2001	2002	2003	2004	2005	2006					2007
	Values	20	22	26	25	28	24	30					34
xiii.	Describe seasonal variation with examples.								2+1	OR	Differentiate between regression and correlation.	1.5+1.5	
xiv	If $\sum X=0$, $\sum Y=245$, $\sum XY=66$, $\sum X^2=28$ and $n=7$.Fit a linear trend.								3	OR	Define ‘signal’ and ‘noise’	1.5+1.5	

SECTION – C (Marks 24)(4×6=24)

Note: Attempt all questions.

Q. No.	Question	Marks		Question	Mark s																																													
Q3	Calculate Arithmetic Mean, Median and Mode of the following frequency distribution. <table><tr><td>Classes</td><td>f</td><td>Classes</td><td>f</td></tr><tr><td>9.3-9.7</td><td>2</td><td>11.3-11.7</td><td>14</td></tr><tr><td>9.8-10.2</td><td>5</td><td>11.8-12.2</td><td>6</td></tr><tr><td>10.3-10.7</td><td>12</td><td>12.3-12.7</td><td>3</td></tr><tr><td>10.8-11.2</td><td>17</td><td>12.8-13.2</td><td>1</td></tr></table>	Classes	f	Classes	f	9.3-9.7	2	11.3-11.7	14	9.8-10.2	5	11.8-12.2	6	10.3-10.7	12	12.3-12.7	3	10.8-11.2	17	12.8-13.2	1	6	OR	Calculate chain indices for the following taking Median as an average <table><tr><td>Year</td><td>Wheat</td><td>Rice</td><td>sugar</td><td>Tea</td></tr><tr><td>1980</td><td>60</td><td>40</td><td>20</td><td>200</td></tr><tr><td>1981</td><td>80</td><td>45</td><td>30</td><td>220</td></tr><tr><td>1982</td><td>100</td><td>48</td><td>35</td><td>250</td></tr><tr><td>1983</td><td>120</td><td>50</td><td>50</td><td>300</td></tr></table>	Year	Wheat	Rice	sugar	Tea	1980	60	40	20	200	1981	80	45	30	220	1982	100	48	35	250	1983	120	50	50	300	6

Q6	Compute 4 year centered moving average for the following time series.			6	O R	Determine the value of correlation (r) between number of absentees (X) and final marks (Y) and interpret the result.										6

Table of Specification

Model Question Paper STATISTICS – Grade XI (HSSC-I)

(Curriculum 2006)

Topics	1 INTRODUCTION TO STATISTICS	2 PRESENTATION OF DATA	3 MEASURES OF LOCATION	4 MEASURES OF DISPERSION	5 INDEX NUMBER	6 REGRESSION & CORRELATION	7 TIME SERIES	Total marks of each assessment objectives	Percentage of Cognitive Level
Knowledge									17%
Comprehension (Understanding)									44%
Application									39%

Key:

- 1, 2, 3 etc. stands for question numbers
- i, ii, iii etc. stands for part of question numbers
- (1), (2), (3) etc. stands for marks of question papers
- Question Number (part/ first choice) marks example: Q2 (i / f) 4
- Question Number (part/ second choice) marks example: Q2 (i / s) 4

Note:

- 1 This TOS does not reflect policy, but it is particular to this model question paper.
- 2 Proportionate / equitable representation of the content areas may be ensured.
- 3 The percentage of cognitive level is 30%, 50%, and 20% for knowledge, understanding, and application, respectively with $\pm 5\%$ variation.
- 4 While selecting alternative questions for SRQs and ERQs, it must be kept in mind that:
 - Difficulty levels of both questions should also be same
 - SLOs of both the alternative questions must be different
